DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 3/22/04 and 1/12/04 have been considered by the examiner and made of record in the application file.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. The drawings on figure 1A, 1B, 2A, 2B and 3 are objected to because these figures did not indicate "PRIOR ART". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and

Art Unit: 2683

informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

Claims 1-6 are allowed.

As to claims 1 and 2, Kuwahara et al (US 2004/0014501) teaches radio communication system using adaptive array antenna. Boro et al (US 2004/0127260) teaches determining a spatial signature using a robust calibration signal. Das et al (US 2003/0148770) teaches method and apparatus for closed loop transmit diversity in a wireless communication system. Seki et al (US 2004/0233871) teaches feedback control method and apparatus in closed loop transmit diversity. Raleigh et al (US 6,665,545) teaches method and apparatus for adaptive transmission beam forming in a wireless communication system. Proctor, Jr (US 6,473,036) teaches method and apparatus for adapting antenna array to reduce adaptation time while increasing array performance. The teaching of above prior arts either alone or in combination fails to teach measuring an elapsed time from reception of the up signal, changing an antenna weight which is a weighting factor for a signal for each mobile station to be inputted to the adaptive array antenna based on a result of the measuring step and generating a directional beam pattern for each mobile station according to the antenna weight.

Dependent claims 3-6 are allowable for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2683

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. This application is in condition for allowance except for the following formal matters:

The drawings on figure 1A, 1B, 2A, 2B and 3 are objected to because these figures did not indicate "PRIOR ART".

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213. .

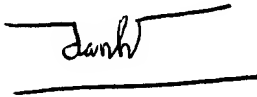

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
